Dear Sir/Madam,

**A244 Walton Bridge  
Re: River Closures**

As part of the ongoing Walton Bridge project, we are moving shortly into the next phase of the works where temporary support towers will be used mid-river to enable us to work more efficiently on the new decks.

This will mean that some partial and short-term total river closures will be necessary to:

- Protect temporary support towers from impact.
- Exclude & hence protect public from a potentially dangerous interface with construction activities.
- Exclude & so protect the public from striking low hanging temporary scaffolding which impinges on the 6m navigation height.

**Partial River Closures**

This will be divided into two phases. Provisionally, Phase 1 (closure of the Walton side of the river) will run from early September 2012 until the New Year with Phase 2 (closure of the Shepperton side of the river) running from the New Year till mid February 2013. Please see the attached plans for proposed river navigation controls.

**Total River Closures**

In addition, we anticipate five short (4hr) total closures starting from 8am being required with a couple of follow-on contingency dates booked to allow for any unforeseen circumstances, such as high winds. We will only implement the closures if they are required.

Current provisional dates for total closures are:

02/10/12  
03/10/12  
29/11/12  
30/11/12  
01/12/12
